PROJECT NAME:

COUPE'

INDOOR COLLECTION

design Bruno Umberto e Lorenzo Gecchelin 2023

"Giving back powerful lighting to environments by combining functionality, aesthetics and emotion is the challenge taken up by Coupe'. A floor and wall lamp that achieves excellent performance creating great visual impact. Thanks to LED technology, Coupè is transformed into a source of light for interiors very similar to that produced by halogen lamps of the past, from which it inherits poetry, power and luminous comfort, but not consumption. The clean design is enlivened by an oblique cut that gives dynamism to the double cylindrical body. Inside, the LEDs can be replaced by the user to simplify maintenance of the fixture which mounts from 1 to 3 light sources, with intensity adjustment. Coupè can be positioned in different contexts, recreating true environments of 'Light for Life'.
