

Contatto C2/C7

Design Gianfranco Marabese 2015

Warning:

Before starting every operation on the device disconnect the electricity.

Assembling instructions:

Fix the canopy **A** to the ceiling and connect the power cables. Cover it with the cover **B** from where the cables with the clamps **H** come out. Fix the anchors **C** on the ceiling at the same distance of the elements **E** of the lamp and connect the aircraft cables **I**. Position the lamps **F** between the bars **D** and adjust the distance between them by screwing the elements **G** clockwise or counterclockwise. Screw the cable ends **L** on the elements **E** to hang the lamp. Put the clamps **H** on the cables **I**. Polarity does not matter, as long as the clamps are on separate cables. **Do not connect both clamps to the same cable as this will cause a short circuit.**
