

GARDEN

INDOOR COLLECTION

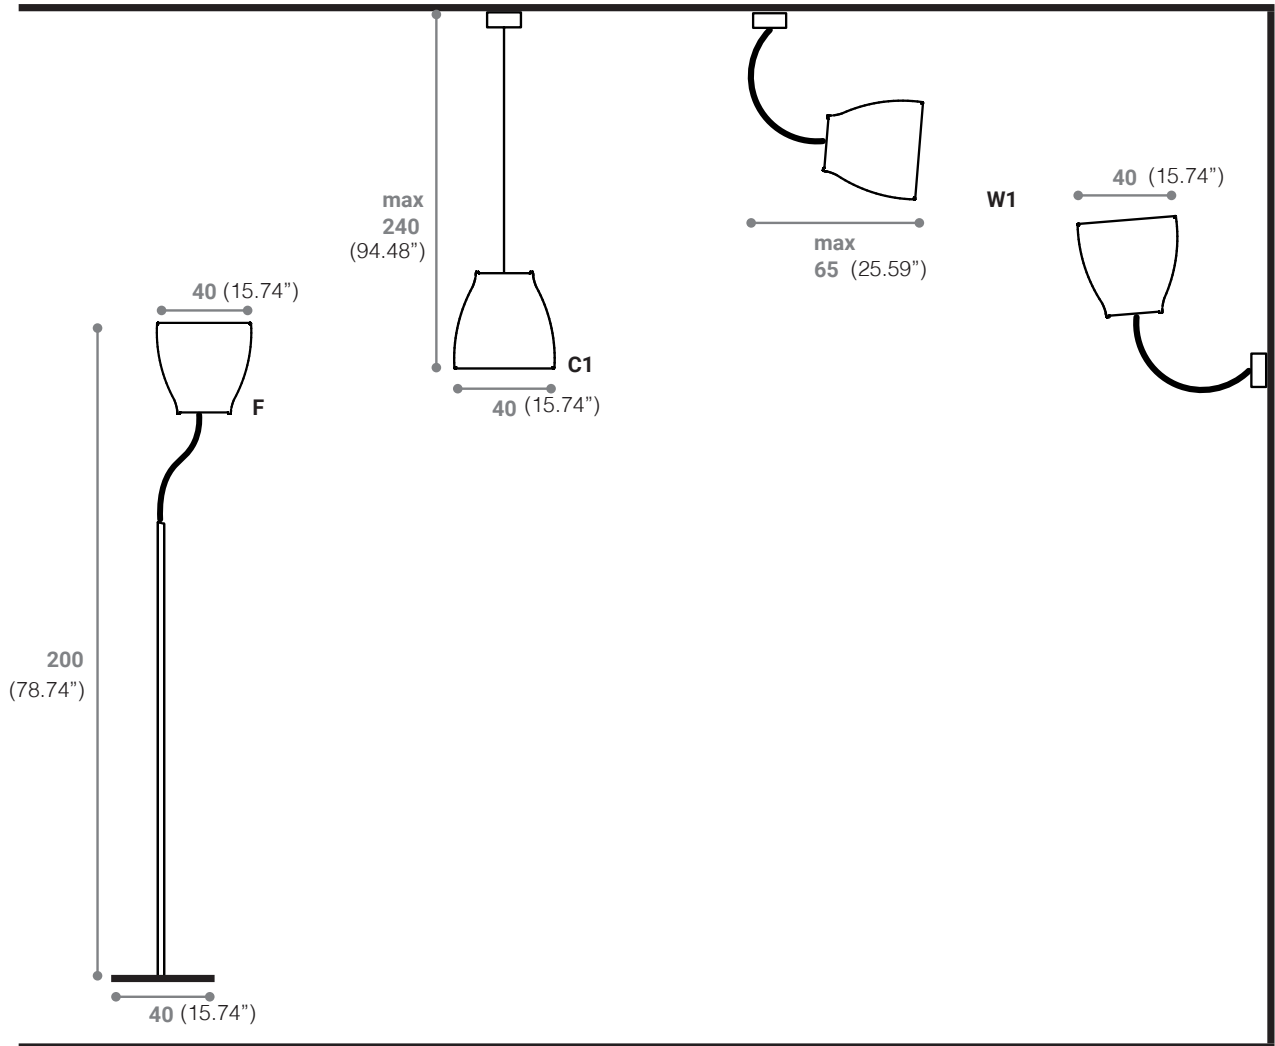

design Gianfranco Marabese 2023

"Garden was born in 1996 as a small aluminum light diffuser hooked to a flexible support that allows it to be oriented. There is a new design, which defines an elegant diffuser, also sought after in the combinations and finishes. New is the technique of the structure, in order to adapt to today's modes of use, types and family, which is enlarged by introducing 2 new sizes. This is how diffusers for high lighting performance and scenic effects take shape, of the product itself, capable of becoming a protagonist in space. In fact, through the flexibility of the supports, there are many possible positions for the diffuser, which customize the lighting effects and directionality of the light".
